# Galagino CYD wiring diagram

Notes:

* R16 + R17 + R20: Remove resistors.

* D1 + D2: Remove and bridge protection diodes. Otherwise, the voltage will be too low and ESP32 reboots.

* R1: Add a 1kOhm pullup resistor between Coin and 3V3.

* USB plug to CYD: I use a plug from a USB cable. Open the plug using a knife.
